

Welsh Ambulance Service NHS Trust Gender Pay Gap Data

Snapshot data 31 March 2017

Women's mean hourly rate is 3.9% lower than men's.

In other words when comparing mean hourly rates, women earn 96p for every £1 that men earn.

Women's median hourly rate is 10.3% lower than men's.

In other words when comparing median hourly rates, women earn 90p for every £1 that men earn.

About mean and median

The mean hourly rate is the average hourly wage across the entire organization so the mean gender pay gap is a measure of the difference between women's mean hourly wage and men's mean hourly wage.

The median hourly rate is calculated by ranking all employees from the highest paid to the lowest paid, and taking the hourly wage of the person in the middle; so the median gender pay gap is the difference between women's median hourly wage (the middle paid woman) and men's median hourly wage (the middle paid man).

Top quartile (highest paid)

34.4% of the top quartile are women

Upper middle quartile

34% of the upper middle quartile are women

Lower middle quartile

46.2% of the lower middle quartile are women

Lower quartile (lowest paid)

43% of the lower quartile are women

Pay quartiles are calculated by splitting all employees in an organisation into four even groups according to their level of pay. Looking at the proportion of women in each quartile gives an indication of women's representation at different levels of the organisation.

No bonuses were paid.
